

## The summer's big news - eDocs-QTM is here! Read below

### Client Story

We always like to share the success of our clients. **Arkia Airlines**, an Israel based airline, has recently gone under IOSA. The airline has implemented the eDocs-Aero Suite for Documentation Management earlier this year, to serve across the entire operation. After only a few months, the system helped Arkia Airlines to pass the **IOSA** with **Zero faults!** The auditors were impressed with both Arkia's cross organizational order, as well as the eDocs-Aero system that helped building it, in such short time.

### eDocs Aero™ update

Over the course of last year, with several implementations in different countries, facing various regulatory demands, *GlobeleDocs* has added and improved some features in the eDocs-Aero Suite. The MRS (Master Revision Status) now has separate listing for controlled and non-controlled documents, and can also be exported to a file, for auditing purposes. Default file size limitations were raised, backup is more frequent, and minor display features make for easier viewing.

### In the Cloud

With all its benefits, Cloud computing still evolves, and new tools are constantly offered to service providers and clients. *GlobeleDocs* has adopted the Amazon "**Cloud Front**", making your use of the system even faster: the more you access a certain file, the faster you will get it the next time, and the user experience keeps getting faster the more he uses the system.

### The NEW eDocs QTM™

The Aviation industry is busy with Training. But the real target is often missed: Going through simulator, or 'Winter training', does not guarantee your Qualifications are met, and are valid! **eDocs-QTM (Qualifications & Training Management)** brings an **innovative** approach - focusing on **Qualifications Management**, thus Training now becomes a resource. The eDocs-QTM is also **effective**, because it gives you an intuitive system that works **across the full regulatory scope** - from the qualifications database, through smart training planning, to personal employee files with qualifications' status, notifications, feedbacks and statistics. YOU get full regulatory compliance, better planning, AND lower training costs.

**This is really an industry changer, that you need to SEE! Contact us for a free demo!**
